Project Overview

The Sphere Style Boutique App is a website application developed as part of an assignment in the WEDE subject. This application was created using HTML. The website's primary purpose is to allow users to create and buy outfits based on different styles and trends they like or would like to follow.

The website was developed to meet the requirements of the assignment, which includes creating a functional website application and utilizing GitHub for version control and CI/CD automation using GitHub Actions.

Purpose and Features

Purpose

The main purpose of this app is to create and buy outfits based on different styles and trends.

Key Features

- Feature 1: The home page is where it shows the main details of what the application is about.
- Feature 2: The about page is where it shows all the information about the business.
- Feature 3: The products page is where all the clothing items are which are ready for customers to buy.
- Feature 4: The enquiry page is where the customers can ask for help and enquire for more advice depending on what they are struggling with.
- Feature 5: The contact page is where it has all the different mediums a customer can use to contact the business.

These features aim to provide an application that functions and allows the user to create and buy outfits.

Design Considerations

The design was based on the following key considerations:

1. User Experience (UX): The app was designed with the goal of providing an intuitive and easy-to-navigate user interface, ensuring a seamless user experience.
2. Responsiveness: The app was built to ensure it performs well on different screen sizes, with particular attention to device compatibility.
3. Simplicity: The design is minimalistic, focusing on core features without overwhelming the user.
4. Performance: Code optimization was considered to ensure fast response times and low battery usage.

GitHub and GitHub Actions

This project was managed using GitHub for version control, where all code changes were committed and pushed regularly. GitHub enabled collaborative coding, allowing me to keep track of changes and maintain project integrity.

GitHub Actions

1. I used GitHub Actions to automate the build and deployment process. This includes:
2. Running tests to ensure the app's functionality.
3. Compiling the app into APK files, which are the formats required for distribution.
4. Uploading these build artifacts to GitHub for easy access.

Site Map

1. Homepage
2. About Us page
3. Products Page
4. Enquiry Page
5. Contact Us Page

Disclosure of AI Usage in My Assessment

In the development of this project, I have used generative AI tools to assist in various parts of the assignment. Below is a detailed disclosure of where and how these tools were used:

1. Section(s) in which Generative AI was used

Assignment HTML Code Breakdown

2. Name of AI Tool(s) Used

Claude Sonnet 4.6 (Arena AI)

Qwen3.8-max (Arena AI)

3. Purpose/Intention Behind Use

Brainstorming: Used Arena AI to generate a better breakdown for the app's functionality.

Designing: Used AI to generate the whole web application to generate ideas and get inspiration on how to layout, structure and design the application.

4. Date(s) in Which Generative AI Was Used

28 August 2026

30 August 20265.

5. Link to the AI Chat(s) or Screenshots

Chat 1 (Part 1): https://arena.ai/c/01a04a02-bb16-7a49-a2ab-8b70dfc23591

- AI provided a breakdown for app development.

Chat 2 (Part 2): https://arena.ai/c/01a0492d-b3c8-788a-a822-55c244984736

- AI assisted with creating the whole app for design ideas and structure.
